## **VISION MISSIONS**

Royal Can aims to build a strong, innovative, and sustainable business platform in which we can responsibly create value for people, businesses, and the economy.

• To consistently manufacture safe and quality products to deliver high customer satisfaction whilst being aware of the environmental impact

To continuously create and develop new innovations, and personnel skills to improve production techniques and hence efficiency using technology

• To widen product selections by not limiting to food packaging but also metal packaging for non-food items and paper packaging

## **NATURE OF BUSINESS**

RCI originally started with steel can production in 1979 to supply cans to seafood companies. As demand for food packaging grew along with advancements in technology, the company expanded its production capacity and capabilities by bringing in retort pouches (also known as flexible cans), providing an alternative to metal cans. Aluminium production line was later installed as well as "Fancy Can" production line with the aim to expand its market beyond food and beverage industry In 2020, RCI began its production for corrugated box to take advantage of the growing paper packaging market.
